

EUROPEAN ELECTIONS 2014: what EGEA expects from the new European Commission for 2014-2019?

- BRAINSTORMING QUESTIONS -

Dear Board Members,
Dear Members,
Dear Working Group Chairmen,

With view to our upcoming EGEA General Assembly to be held on May 28th in Bologna and in particular regarding the discussion under point 7 of the agenda, we would hereby like to collect some input from your side on what EGEA expects from the new European Commission for 2014-2019 and to invite you to reflect on the following questions:

- What are the challenges you face in the next 2,5,10 years?
- What are the major changes you see in the garage and test equipment landscape today and tomorrow?
- Which external factors hinder you or your member companies from performing well in the garage and test equipment market, for both the OEM and aftermarket sectors?
- Which challenges can be addresses at European level/ by the European Institutions?
- What should the EU legislation do for the garage and test equipment industry?
- Which points should be included in a future European framework for the garage and test equipment industry?
- How can the policy framework highlight the (European) policy measures and actions which would be needed to maintain and increase the competitiveness of the garage and test equipment industry and its companies?

Looking forward to a fruitful discussion.
